7 Yrs	99.9%+	3×	~60%	6h→30m	0
Experience	Platform Uptime	Faster Deployments	Faster Detection	Env Provisioning	P1 Deploy Incidents

PROFESSIONAL SUMMARY

Senior Platform Engineer & SRE with 7 years designing, automating, and operating large-scale cloud-native platforms on AWS — across Fortune-500 product companies and enterprise IT consulting engagements. I build and own the platform that 30+ engineering teams rely on: sustaining 99.9%+ uptime, tripling deployment frequency, cutting incident detection by 60%, and compressing environment provisioning from 6 hours to 30 minutes. Equally fluent in agile product-engineering culture and structured service-delivery models. Core expertise: EKS at scale (~200-node clusters), Terraform IaC, Jenkins & GitHub Actions CI/CD, GitOps, SLO-based reliability, full-stack observability (OpenTelemetry · Grafana LGTM · Prometheus), DevSecOps, and FinOps. Actively uses GitHub Copilot, ChatGPT, and Claude to accelerate IaC authoring, runbook drafting, and architecture documentation.

TECHNICAL SKILLS

Cloud / AWS	EC2, EKS, VPC, IAM, ALB/NLB, Auto Scaling, S3, RDS/Aurora, ECR, Route 53, Secrets Manager, CloudWatch, X-Ray, Cost Explorer · Azure (AKS basics) · GCP (GKE basics)
Kubernetes	EKS, Helm, Karpenter, HPA, VPA, KEDA, RBAC, NetworkPolicies, Pod Security Standards, Admission Webhooks, Custom Controllers, OTel Operator
IaC & Config Mgmt	Terraform (modular, remote state, OPA policy-as-code, drift detection, Checkov) · Ansible (playbooks, roles, inventory) · CloudFormation
CI/CD & GitOps	GitHub Actions, GitLab CI, Jenkins (pipeline-as-code, shared libraries) · Argo CD, Argo Rollouts (canary / blue-green) · GitOps, PR-gated promotions, auto-rollback
Observability	OpenTelemetry (SDK, Operator, Collector) · Grafana LGTM (Loki/Mimir/Tempo) · Prometheus · AWS X-Ray · CloudWatch · SLO dashboards · distributed tracing
SRE Practices	SLO/SLI definition · error budget management · toil reduction · capacity planning · on-call design · incident command · blameless postmortems · chaos engineering
Security	OPA Gatekeeper · Falco runtime security · Trivy CVE scanning · SAST/DAST in CI · Secrets Manager · IAM least-privilege · zero-trust · CIS benchmarks
Scripting & Tools	Python, Bash/Shell, YAML, Go, Linux (RHEL/Ubuntu), Git, Docker · JIRA · Confluence · ServiceNow
AI Tools	GitHub Copilot (Terraform / K8s YAML / Bash) · ChatGPT (architecture review, runbook drafting) · Claude (postmortem generation, ADR writing, YAML debugging)
AI/ML Infra	GPU NodePools (Karpenter) · vLLM · KServe · MLflow · Kubeflow Pipelines · KEDA autoscaling · SageMaker (learning)

PROFESSIONAL EXPERIENCE

Senior Platform Engineer & SRE · Target Corporation — Mar 2023 – Present

Platform Engineering · SRE · AWS EKS · Terraform · GitOps · Observability · SLO Engineering · Team Leadership

- **Platform reliability & autoscaling —** sustained 99.9%+ uptime over 24 months on a ~200-node production EKS cluster running 30+ microservices across 4 environments (~5M req/day). Implemented HPA + Karpenter node autoscaling — cluster absorbs 2–3× traffic surges within 90 seconds. Zero unplanned downtime across Black Friday & Cyber Monday.
- **SLO engineering & error budget management —** defined SLIs/SLOs for 30+ services; implemented burn-rate alerting (14.4× fast-burn → page, 6× slow-burn → warn) — shifting team to error budget consumption and reducing alert noise by ~45%.
- **Full-stack observability & OpenTelemetry —** deployed OTel Collector DaemonSet routing ~50M spans/day to Grafana LGTM; 100% trace coverage via OTel Operator auto-instrumentation with zero code changes; single-click alert → trace → log RCA. MTTD ↓60%, RCA time ↓35%.
- **GitOps CI/CD & Terraform IaC —** architected GitHub Actions → Helm → Argo CD pipeline with Argo Rollouts canary (5→25→50→100%) and Prometheus analysis gates — tripled deploy frequency (~60 releases/week), zero P1 deploy incidents over 18 months. Reusable Terraform module library cut env provisioning from 6h to 30min (−92%).

- **FinOps, security & toil reduction —** Karpenter Spot-first + bin-packing saved ~$120K/year in idle compute (~30% reduction). Eliminated hard-coded credentials via Secrets Manager; OPA Gatekeeper, Falco, Trivy CVE scanning — zero critical CVEs for 12 months, CIS EKS Benchmark compliant. Reduced operational toil by ~8h/week.
- **Multi-AZ architecture & DR —** designed 3-tier multi-AZ VPC (public / private / intra) across 3 AZs with HA NAT gateways, isolated control plane subnets. Route 53 health-check failover + RDS Multi-AZ — RTO < 15min / RPO < 5min validated in quarterly DR drills.
- **Leadership & incident management —** led & mentored a 3-engineer platform sub-team; ran bi-weekly SRE knowledge sessions adopted by 30+ teams. Authored runbooks and blameless postmortem framework — cut repeat incidents ~40%, MTTR < 30min for all P1s over 18 months.

Cloud Infrastructure Consultant · Virtusa — Jun 2022 – Feb 2023

Multi-Client AWS Infrastructure · Jenkins CI/CD · Terraform at Scale · Consulting Delivery

- **Multi-environment IaC & CI/CD —** architected dev/QA/pre-prod/prod AWS environments for 2 enterprise clients with isolated Terraform state (S3 + DynamoDB locking), OPA policy gates, and branch-triggered Jenkins shared-library pipelines — cut provisioning time ~65%. Presented architecture to client stakeholders at each milestone.
- **Terraform module library & observability baseline —** delivered reusable Terraform module library (VPC/EC2/S3/IAM/ALB) adopted as team standard across 8 engineers; zero state corruption. Introduced OTel SDK tracing across 4 core services — surfaced 5 latency hotspots reducing p99 API latency by ~25%.

DevOps Engineer · Quest Global — Oct 2021 – May 2022

Containerisation · Jenkins CI/CD · Kubernetes Operations

- **Containerisation & CI/CD —** containerised 10+ microservices with standardised multi-stage Docker builds (distroless, non-root) — cut build time ~35%. Built Jenkins pipelines (build/test/Trivy scan/ECR push/K8s deploy) with shared libraries — compressed release cycles from bi-weekly to daily. Tuned K8s probes and CloudWatch alarms — reduced false-positive on-call pages ~45%.

Associate Systems Engineer · Tanama Software — Oct 2019 – Sep 2021

Linux Systems · AWS Fundamentals · Monitoring & Documentation

- **AWS infrastructure & documentation —** managed Linux-based production AWS infra (EC2/VPC/ALB/Auto Scaling/RDS/DynamoDB/S3/Route 53) for multiple clients maintaining 99%+ availability SLA. Designed 3-tier VPC topology with zero misconfigurations. Authored runbooks and SOPs — cut escalations to senior engineers ~30% and reduced onboarding time ~30%.

NOTABLE PROJECTS & OPEN SOURCE

aws-eks-platform-blueprint	Production-grade IDP on EKS — Terraform + Helm + Argo CD. Karpenter, HPA, KEDA, RBAC, OPA Gatekeeper, Secrets Manager, multi-env. Flagship repo.
gitops-cicd-pipeline	GitHub Actions → Argo Rollouts canary. 5%→25%→50%→100% with Prometheus analysis gates, sync windows, auto-rollback on SLO breach.
k8s-observability-stack	Grafana LGTM + OpenTelemetry + X-Ray. SLO burn-rate alerting, pre-built dashboards, runbook templates per alert.
aws-secrets-hardening	Secrets Manager + ESO patterns. IAM least-privilege, auto-rotation, OPA zero-creds enforcement, Falco runtime detection rules.
mlops-eks-platform	AI/ML Platform on EKS — GPU NodePools (Karpenter), vLLM, KServe inference with canary rollouts, MLflow (S3 + RDS backend), Kubeflow Pipelines, KEDA autoscaling.

EDUCATION

Bachelor of Science — Computer Science — 2013 – 2016

Acharya Nagarjuna University, Guntur, India
